

EIC3600 COMMERCIAL DATABASE SEARCH REQUEST

☐ RUSH - SPE signature required: _____

Business Methods Case: 705/26,27

Staff Use Only
Access DB# <u>110124</u>
Log Number

Write in 705 subclass(es) to search required files for 705 cases or cases cross referenced in 705.

Requester's Full Name: Forest Thompson Examiner #: 70652 Date: 12/09/2003

Art Unit: 3625 Phone Number 703-306-5449 Serial Number: 09/773,298

Bldg & Room #: 7B27 Results Format Preferred: ☒ PAPER ☐ DISK ☐ E-MAIL ☐

If more than one search is submitted, please prioritize searches in order of need.

Provide the PALM Bib page or the following:

Title of Invention: Method and Apparatus for Conducting Domain Name Service

Inventors (provide full names): Brian Shuster; Gary Shuster

Earliest Priority Filing Date: 01/31/2000

Requested attachments:

- If possible, provide the cover sheet, the IDS, examples, or relevant citations, authors, etc, if known.
- Please attach copies of the parts of this case that help explain or are most pertinent to this search. Examples are: **abstract, background, summary, claim(s) [not all of the claims].**

The claimed or apparent novelty of the invention is:

A method for conducting Internet domain name service to users connected to te Internet comprises an automated procedure for transferring Internet domain name service from a domain name owner to a domain name manager. This method comprises Internet sub-domain name services to prospective buyers based on domain names transferred to the domain name manager. Messages requesting domain name service, including requests from domain name owners to sub-license their particular domain name to prospective sub-domain buyers and from prospective sub-domain buyers to license available sub-domain names, are received and responded to by an automated domain name management system.

This search should focus on:

(Also include keywords or synonyms)

domain name license	domain name service (DNS)	sub-domain name service
license users of sub-domain names	domain name manager	transfer domain names to buyers
domain name management system	website	database
sub-license sub-domain name user		search engine

Special Instructions or Other Comments

Questions about the scope or the results of the search? Contact *the EIC searcher* or contact:

John Sims, EIC 3700 Team Leader
308-4836, CP2-2C08

Voluntary Results Feedback Form

➤ I am an examiner in Workgroup: Example: 3730

➤ Relevant prior art **found**, search results used as follows:

- ☐ 102 rejection
- ☐ 103 rejection
- ☐ Cited as being of interest.
- ☐ Helped examiner better understand the invention.
- ☐ Helped examiner better understand the state of the art in their technology.

Types of relevant prior art found:

- ☐ Foreign Patent(s)
- ☐ Non-Patent Literature
(journal articles, conference proceedings, new product announcements etc.)

➤ Relevant prior art **not found**:

- ☐ Results verified the lack of relevant prior art (helped determine patentability).
- ☐ Results were not useful in determining patentability or understanding the invention.

Comments:

Yahoo!'s SiteBuilder 1.0, which is only for Yahoo!'s Web hosting **service**, gets good marks overall, with excellent marks for usability and manageability, and good marks for capability, performance, scalability, and security. SiteBuilder 1.0 is a well-implemented and useful authoring tool that eases tasks required to integrate various Yahoo!-only **services**. The primary advantages of the toolset are speed and ease of use in creating a business Web site and **managing** content updates. The free tool can be downloaded, and Yahoo! features are integrated with drag-and-drop tools, including Yahoo! Messenger and Yahoo! Maps. Adding...

...Web-enabled applications is not an unusual idea, but many IM providers would envy the straightforward SiteBuilder design. Yahoo! Messenger can support real-time customer **service**. During testing for site-editing, SiteBuilder worked well for testing and also accelerated creation of content with such tools as grid positioning, a navigation bar editor, and an interface that permits easy editing of multi-page sites. Business Standard and Business Professional **services** provide the widest range of features, including support for PHP/MySQL, Perl, and group calendaring. All of the various SiteBuilder **service** options include e-mail accounts, domain name registration, and **subdomains**.

Improving your image -- How to polish your Web presence

BOTTOM LINE column gives specific advice for keeping a company **Web site** from becoming an advertising liability. Suggestions include using a single personalized domain name for everything, including e-mail. Advises what to do when **Web** and e-mail **services** are provided by different hosts. Cautions against using third-level domains, explaining that these usually dilute site effectiveness and confuse customers. Suggests adding an alias using the same domain name to the site DNS entry that is a non-www. **subdomain** , to help ensure customers find the site. Reports on the pitfalls of poor content, out-of-date content, and slow **search engines** . Concludes, ``The Internet may be the future of business, but if you don't know how to use this medium properly, you can do yourself...

Title: Personal Web Space

Abstract: This paper describes the functional requirement and architecture of a software system called Personal Web Space (PWS). A PWS is a system to manage the information from the WWW, for either leisure or work related use. Similar to bookmarks, a...

... First, a method is prescribed to rank a page (or an URL address) based on the degree of importance to a person as determined by **search engine** responses and user input. Second, the information stored in a PWS must be refreshed periodically to keep up with the new state of information available...

... technique is proposed for determining and monitoring freshness. Thirdly, a PWS evolves through enlargement to include more information domains, or refinement to concentrate on smaller **sub - domains**. The paper describes how enlargement and refinement operations are mapped on to the stored PWS data dictionary. Finally, key-word queries can be issued against...

... information quickly. In this sense, a PWS uses a combination of information caching, information retrieval and bookmark technique to enhance significantly user performance on the **Web**.

Abstract: For very large document collections or high volume streams of documents such as information resources on the **Web**, finding relevant documents is a major information filtering problem. Traditional full text retrieval methods cannot locate documents which use specialised synonyms or related concepts to the formal query. This is particularly a problem in legal document collections, since lawyers use normal words with specialised meanings which vary subtly between legal **sub - domains**. The authors use a neural network approach to learn synonyms and related clusters of words defining similar concepts from a sample document set. They demonstrate...

...Abstract: function restricted to-the interface. As an application, for the discrete Poincare-Steklov operator with respect to either a line (edge) or a star-shaped **web** associated with a single vertex point, a preconditioner can be constructed by first imbedding the line as the diameter of a disk, or the **web** as a union of radii of a disk, and then using the Green's function on the disk. The proposed technique can be effectively used in conjunction with various existing domain decomposition techniques, especially with the methods based on vertex spaces (from multi-**subdomain** decomposition). Some numerical results are reported.

Alldomains.com's New Search Engine Scours Internet for more than 675 Domain Name Extensions for Free

BUSINESS WIRE

September 28, 1998

JOURNAL CODE: WBWE LANGUAGE: English RECORD TYPE: FULLTEXT

WORD COUNT: 364

PLEASANT HILL, Calif.--(BUSINESS WIRE)--Sept. 28, 1998--
Alldomains.com, a leading provider of global domain **name registration** services, announced today that Internet users can now search the entire World Wide Web for domain **names** in every currently recognized domain extension for free at www.alldomains.com. Alldomains.com's Allsearch(TM) querying tool searches more than 675 currently recognized domain extensions including .com, .net, .org, as well as all country code domains and their **subdomains**. "You just have to listen to one Fortune 500's horror story about the time and expense of litigating a domain dispute to realize the ease and value of our Allsearch and global **registration** process," said Chris Bura, President and CEO of Alldomains.com Now, anyone can conduct an extensive search by simply pointing his Internet browser to www.alldomains.com and selecting the advanced search option. Once the option is selected, the user will enter the domain **name** he is searching for and select up to 50 extensions per query to include in each search. Within several minutes Allsearch(TM) will send the...

...Internet user's e-mail address. Unlike other domain searchers that check .com/.net/.org and the top level country codes, Allsearch checks every known **sub - domain** of every domain. For example, a **name** may not be taken in the UK's commercial .co.uk, but it may be taken in .ltd.uk or .plc.uk, two other less-known commercial **subdomains**. Alldomains.com also provides rapid global domain **name registration** services at its **Web site**. Additional services include **Web site** forwarding, Home Page Now!(TM) for virtual site hosting, Max-URL(TM) allowing "anything.yourdomain.com" besides the usual "www.yourdomain.com," and e-mail forwarding. Alldomains.com is the official **registrar** for .AC, .AM, .CC, .MS, .NU, .SH., .TC., .TJ, .TO and .VG domains. In addition, Alldomains.com provides **registration** for and information on all other country-code domains. Founded in 1996, Alldomains.com (www.alldomains.com) is headquartered at 2261 Morello Avenue, Suite C, Pleasant Hill, California. Editors Note: Alldomains.com, Home Page Now!, MAX-URL, and Allsearch are trademarks of Alldomains.com Inc. All other trade or brand **names** mentioned herein are the property of their respective owners. CONTACT: Alldomains.com Chris Bura, 925/685-9600 www.netcorps.com chris@alldomains.com

TEXT:

...are popular with companies wanting to get a better view of local markets abroad."

The idNames proprietary search software quickly searches and reports on names **registered** in all country code top-level domains and **sub - domains**. The idNames database is set up to navigate the multiple technical and regulatory issues that must be addressed when **registering** a domain name in any one country. Country code requirements vary widely on issues such as whether a company needs a local presence to **register**, where the DNS host can reside, **registry** fees, dispute policies and payment policies. Once having searched and reported on available names to its clients, idNames assists its clients in completing the **registration** process.

Prior to the acquisition, Internet Domain Names, Inc. operated as a subsidiary of Multimedia Publishing Corporation. Marc Ostrofsky, founder and owner of Multimedia Publishing...

... your corporate identity and gives you a unique presence on the Web.

It's no longer acceptable for your business Web site to be a **subdomain** of an ISP, such as www.geocities.com/athens/19221/Yourcompany or a third-level domain, such as www.yourcompany.demon.co.uk. It simply isn't good for branding, which explains why -- in the UK alone -- some 20,000 domain names are **registered** each month by companies and individuals who want their own online identity.

Rules and regulations

The domain name industry deals with three kinds of domain...Armenia and the Federal States of Micronesia. Capital.fm is already registered, as is cool.fm, classicrock.fm and pirate.fm.

Similarly, the Bhutan domain **register** means BT's many different departments could use john@marketing.bt or john@technical.bt. Taking advantage of the Austria suffix- .at-Web forwarding company Rename.Net (www.rename.net) is offering **subdomains** under the likes of dine.at and play.at. Other potentially useful suffixes include .st from Sao Tome and Principe, and .hm (as in the... X

... coop, .info, .museum, .name, and .pro, and is considering a host of proposals to activate additional gTLDs. In addition, various host countries grant agreements to **registrars** to represent and perhaps manage specific domain extensions and **subdomains** or country code TLDs. For example, VeriSign Global **Registry** Services (www.verisign-grs.com/) maintains the definitive directory of some 30 million dot-coin and dot-net domain name Web addresses and propagates this information from its root server throughout the Internet. It also responds to billions of DNS look-ups daily. The ICANN site lists accredited **registrars** (www.icann.org/registrars/accr-edited-list.html), while a complete list of ccTLD **registrars** and contact info can be found on the Internet Assigned Numbers Authority (IANA) site (www.iana.org/cctld/cctld-whois.htm).

DOMAIN NAME RIGHTS AND...

...awoke to their need to acquire, manage, and protect a new intellectual property asset. Today, there are well over 1,000 known domain extensions and **subdomains**, as well as close to 400 "official" **registration** services (not including unaccredited hosting companies and other third-party providers of domain name **registration** services).

Some country codes have taken on new meanings, such as Armenia (.am), the Federated States of Micronesia (.fm), and Tuvalu (.tv) which have become...archival WhoWas data tracking of changes in ownership and other major elements over time.

When introduced, File 225 included information on all available, expired, and **registered** dot-corn, dot-net, and dot-org gTLDs ...

dot-coop, dot-edu, and most top-level ccTLDs. Through Snap-Names, Dialog is moving aggressively to formalize relations with a large number of top **registrars** to obtain their fuller data directly for integrating with the complete, but "thin" zone records. Dialog likely has the most extensive set of complete or "thick" records for the three prime gTLD extensions. However, still missing are some other important gTLDs and **subdomain** international ccTLDs, though this will likely be resolved by the time you are reading this article.

There are already some 80 million WhoIs and WhoWas...

Setting up your own web server is easy if you have a bit of computer savvy. The problem is your IP address, a series of numbers that identify your computer on the web . Unfortunately, yours is most likely dynamic, in other words, often changed by your ISP -- which makes your computer hard to find. Enter Tzo.com, which, for a yearly subscription price, offers to keep track of your IP address so you can use your PC as a mail or web server. Tzo will take any domain name you choose and make sure your mail and web page requests arrive at your computer. I tested Tzo's Premiere Domain Name System Service (\$59.95 a year), and found it very easy to install and run. First, Tzo takes over as your name server, the program that translates domain names (say, yourdomain.com) into IP addresses (example: 62.34.24.101). If you want to host your own domain name on your PC, you'll need to transfer your name service duties from the current holder, probably the company you registered the name with, to Tzo. In my case, it took just a few minutes to do this at Register .com, although this process varies widely by registrar . (click to see larger image) Set up is easy and is made simpler by good documentation on the Tzo.com web site . To get Tzo up and running, I downloaded and installed a small client (just over a megabyte). I configured the client by choosing my connection type (cable modem) and creating a subdomain at tzo.com (mine is heltzel.tzo.com). Once the client is installed, it sends a data packet to a Tzo computer every 5 to 10 minutes to identify your IP address. I had to wait a day for the name service change to be recognized on the Web . Meanwhile, I installed Microsoft's Personal Web Server from the Windows 98 CD-ROM, and the ArGoSoft mail server, also free. Each installed as simply as most shareware, and in an afternoon, my PC was serving web pages and handling my e-mail. Those aren't the only uses. My computer can now be found at my domain for videoconferencing, making Net phone calls, or accessing my files remotely. Despite a breezy installation and start-up, there are potential downsides to serving your own web pages. My PC is now open for business, and a talented hacker could potentially find a back door I'm not aware of. I use...

IP, the P.O. Box of the Future

Leslie Walker

NEWSBYTES

July 06, 2000

JOURNAL CODE: FNEW LANGUAGE: English RECORD TYPE: FULLTEXT

WORD COUNT: 1179

... a similar idea from his new partner, Jim Rutt, chief executive of Network Solutions Inc., the company that maintains the master database of Internet domain **names**. VeriSign Inc. is buying Network Solutions for about \$15 billion. Rutt suggested that domain **names** --words linked to IP numbers--might become universal identifiers. People might **name** all their Internet-enabled devices, from telephones to lawn sprinklers. Each master

John Sims EIC 3700 308-4836

Internet address (say, `www.BillClinton.com`) could have many sub-domain **names** (`bedroom.TV.BillClinton.com.`) "You could have a whole set of domain **names** for your devices," Rutt explained. "So if you are at your office and want to check on the status of your home air conditioner on a hot day, you just type in its domain **name** and see if it is working." Sclavos and Rutt were describing what geeks call super-DNS, the next-generation Internet domain- **name** system. Experts believe the system will need major tweaking for it to manage a world in which even vegetables at the grocery store may be monitored by the Internet. The existing system works like this: Domain **names** are translated by computers into unique numbers called IP addresses, which pinpoint the whereabouts of each computer on the Internet. Domain **names** were invented to spare us from having to remember long numbers. You type in `Amazon.com`, and a computer looks up its matching numerical address in a database, then whisks you to the computer numbered `208.216.182.15`. You can also reach Amazon's **Web site** by typing that number directly into your **Web** browser. Some folks wonder why we couldn't do something similar with telephone numbers--link them to domain **names** so we could call one another by punching in words rather than numbers. That might help with Internet telephony, since people are already placing Net...

... to profile you and track you," warned Michael Froomkin, a University of Miami law professor. Others are skeptical of the technology, saying that while domain **names** could serve as unique identifiers, that wouldn't work for IP addresses, because the domain- **name** architecture prevents permanent assignment of most IP numbers. (IP addresses are largely tied to Internet service providers, so a company or person switching **Web** hosting companies is assigned a new IP address.) Sclavos acknowledged it would take two or three years to design an addressing scheme flexible enough to... ..might be looming with so many billions of Net devices on the horizon. In fact, we are running out of IP numbers. Today's domain- **name** system will reach its limit at roughly 4 billion IP addresses. About half have already been allocated, and experts project the Internet will gobble up the other 2 billion before 2010. A new domain- **name** system dubbed IP Version 6 has been developed to help the Internet break through its address ceiling by allowing each IP string to contain more...

... the entire Internet to this system won't be easy. "It is going to be a huge move," said Kim Hubbard, president of the American **Registry** for Internet Numbers (ARIN), which administers IP numbers in North and South America. "Getting the community to buy into V6 is going a lot slower...

...will be adopted before crunch time. Not only must engineers increase the numbers of IP addresses, but they must also expand the inventory of domain **names**. The group that oversees domain **names**, the Internet Corporation for Assigned **Names** and Numbers, has long debated new domain suffixes and is expected to approve a plan to create new ones (`.nom`, for instance, might join `.com`) at its meeting in Japan next week. By expanding the universe of domain **names**, the extra suffixes might help us **name** gazillions of new devices without clashing with phrases already used by dot-coms. More **names** won't solve the technical challenges, though. Internet service providers currently match **names** with IP numbers for all but the largest companies. Many big companies have computers--called domain- **name** servers--that map domain **names** to IP addresses. When its IP addresses change, a big company can simply reprogram its **name** servers to point to its new numbers. But individuals and small companies don't have **name** servers, at least not yet. Computer makers are designing powerful home computers that will serve as electronic gateways to households, helping us control our networked ovens, refrigerators and portable computers as well as our PCs. One likely function will be assigning domain **names**. At the

same time, engineers who set communication standards for the Internet are working on software rules that could extend the Internet domain- **name** system more deeply into homes as well as into telephony. A number of policy and business issues must be resolved first. "For you as a user to be able to tell whoever runs the DNS what you want to see (linked to your domain **names**) is going to take a little while," said Scott Bradner, a Harvard University consultant involved in the effort. I can be patient. In case this...

... typically associated with transferring names.
Likewise, companies can register any variation of their domain name and all web and mail alias, web forwarding, DNS management, **sub - domain** creation and other services are completely free, including limited e-mail addresses and **sub - domains** for different business units. AD of these services have been designed to put the user in complete control of his domain, creating a seamless front-end **web** solution. The simple user interface me customers can manage all **registered** domains from one account and Speednames.com will handle all the back end processing.
Speednames.com is available in English, German, French, Spanish, Italian, Dutch...

(USE FORMAT 7 OR 9 FOR FULLTEXT)

Currently there are almost 700 registered domain names in Zimbabwe and because one domain name can have sub- domains, the number of **web - sites** is well over 1000. This number does not include Zimbabwean **websites** that have been **registered** elsewhere : such as those with a .com at the end. Kenya only has 424 **registered** domain **names** but South Africa has more domain **names** **registered** than the entire continent put together with 37,475.

The top nine countries include: South Africa (37475), Sao Tome and Principe (3902), French Southern Territories...

...University.

According to Fabrimetal, Belgian commercial sub-domains will shortly be introduced on the Internet. DNS.BE. will cooperate with companies which may work as **registration** offices for domain **names** . These companies may include Internet providers, **website** builders and also database suppliers or Chambers of Commerce.
